RE: Pre Application Meeting Written Narrative and Project Summary

Dear Planning Director:

Project Description

Verizon is proposing to install a new 150' wireless communication facility monopole located at the City water tank site in the Talus Development. All ground equipment will be placed inside a 10' X 10' fenced leased area. The pole will be designed for collocation of additional carriers. A generator is not being proposed and a generator plug will be installed for emergency purposes.

Verizon Wireless strives to provide excellent wireless service for our customers with a network of cell sites that allows our customers to reliably place and receive mobile phone calls. In this particular case, we are trying to provide and enhance coverage in the residential areas of the Talus development. Due to the terrain and surrounding dense forest, the site will need to be at a high elevation in order to create a clear line of site.

The proposed wireless communication facility will comply with the Issaquah Municipal Code Chapter 18.07.505 titled Wireless Communication Facilities.

Respectfully,

Angela Raymond
